The universal invoice is used for settling (invoice/credit) processes that are not related to shipment. These generally comprise auxiliary services such as workshop, leasing and storage settlements which are not processed directly in conjunction with a shipment service.

■ Features

- Master data management (addresses, goods and service types, assignment to accounts, etc.)
- Freely configurable goods and service types
- Freely configurable text macros
- Management of order statuses and order types
- "auto replace" function for variable goods and service types
- Assignment of accounts for each document item
- Mapping of organizational structures (company, client, branch)
- Multicurrency capability
- Mapping of logically connected goods and service types (bills of materials)

■ Interfaces

- Financial accounting
- Oracle Discoverer (freely definable analyses)
- Excel, Word
- Digital dossier (document management)
- Management of unit load devices
- Fleet management
